

## PRESS RELEASE

Utrecht, November 30<sup>th</sup>, 2011

### Print Stars Germany awards Komori H-UV its third accolade

Print Stars 2011 winners were recently rewarded with 'The Innovation Prize of the German Printing Industry' in front of a record 430 guests at the annual ceremony which took place at the Culture and Congress Hall in Stuttgart, Germany. The organization received more than 373 submissions from in excess of 900 participating companies. Prizes were announced in 13 categories with four special prizes.

### **In the category 'Technology Druck' Komori's innovative and successfully introduced H-UV curing drying system was awarded the 2nd prize!**

This is the third time within one year in which Komori's H-UV drying system has won awards. Companies with the system are profiting from reduced paper waste and ink usage, lower use of energy, fewer man hours and, because of the H-UV system's quick drying, the elimination of spray powder and no marking. The outstanding improvement in drying time coupled with higher printing quality on various substrates has previously led to awards in the USA and Japan - now Europe -where more printers are quickly becoming enthusiastic about the Komori-developed H-UV system .

In August 2011, Komori America won the first prize in America's InterTech™ Technology Award for H-UV Technology and in February 2011 the Japanese printing industry, organized by the Japanese Society of Printing Science and Technology presented Komori Corporation with the coveted Technical Award for its development of the H-UV system.
