

Advanced GTT® Anilox Rollers

K-Supply

The K-Supply Advanced GTT® Anilox rollers developed by Apex International, enables the coating to transfer in a smooth and precise flow. The difference between these GTT® rollers and any other anilox rollers (hexagonal, positive screens and tri-helical) will be measured by the following three parameters:

1. The Open Slalom Channel geometry sets coating free.
2. A consistent and precise channel to engrave is guaranteed by a constant beam laser engraving, that functions as a continuous-phase laser process, creating a smooth channel.
3. A super-hard non-wetting hybrid ceramic that minimizes porosity, creating a longer lifetime of the roll.

Benefits

- Maximized visual coating results:
- A smoother coating surface with homogenous laydown.
- Less coating, same amount of gloss
- Easily solving microfoaming, an orange peel-effect and pinholing.

Profitability boost

- Savings in coating costs.
- A higher efficiency due to rare roller changes.
- Better margins because of high value jobs.

Specifications

Product name	K-Supply Advanced GTT® Anilox Rollers	
Volume	GTT® OFFSET S	2,15 g/m ²
	GTT® OFFSET M	2,50 g/m ²
	GTT® OFFSET L	3,25 g/m ²
	GTT® OFFSET XL	4,30 g/m ²
	GTT® OFFSET XXL	5,00 g/m ²
Packaging	Delivered in a K-Supply crate	
Extra	K-Supply logo engraved
